BECdirect

A good contact.

BECKTRONIC presents a well-engineered process with the direct bonding of stencils.

With direct bonding, BECKTRONIC offers an excellent alternative to mesh mounted as well as to quick-tensioning stencils. BECdirect, the stencil that makes others look old quickly. Available for all frame versions.

The directly glued stencil ensures high tension and stability, even with the thinnest metal sheets $\leq 100 \mu\text{m}$. The associated frame is reusable. The process requires a lot of know-how and experience, as the perfect interplay of physical parameters leads to the desired success with BECdirect.

BECdirect provides optimal work results immediately:

- Complete and therefore maximum frame inner area as print area
- Higher surface tension compared with the mesh mount
- Better release behaviours through smaller snap-off distance
- Without losses in quality under extreme pressure loads
- Bonding is resistant to all types of stencil cleaning agents including ultrasound
- Eliminates fabric/ steel mesh weaknesses

BECKTRONIC - comprehensive advice and short delivery times

Standard delivery times of one day – no additional fee or express surcharge
Free 4 hours express service – for quick-tensioning and prototype stencils
(for orders received before 3 pm)
